OBJECTIVE

I'm a dedicated Information Technology undergraduate with expertise in SCRUM Methodologies and Software Development Lifecycles. I'm Seeking a Business Analyst Internship in a dynamic software company to leverage technical proficiency and cultivate analytical acumen. While possessing excellent communication, strong interpersonal, and multitasking skills, I'm eager to apply theoretical knowledge gained in my coursework to real-world scenarios. I aim to contribute effectively to project coordination, client handling, and documentation, and I'm adaptable to fast-paced, evolving environments. I'm enthusiastic about applying my skills to support the innovative initiatives of the industry while fostering continuous learning and professional development.

EDUCATION

BSc.(Hons) in Information Technology Spec. in IT (2021 - Present)
Sri Lanka Institute of Information Technology

GCE A/L Examination : (index 1668035) (2020)
Taxila Central College - Horana

PROJECTS

RESTAURANT MANAGEMENT SYSTEM | MERN STACK

'Oracle' Restaurant Management System is a system that has been developed from MERN stack, It consists of fully functional CRUD operations and responsive design. In this system, I created the employee management component, incorporating a secure login system. My proficiency in requirement gathering and creative approach contributed to designing a user-friendly employee management module.

"JOBS.LK" MOBILE APPLICATION | KOTLIN, REACT.JS

"Jobs.lk" is an Android application designed as an online job marketplace, built using Kotlin and React with Firebase as the database backend. This app facilitates job seekers in finding opportunities and allows recruiters to post job vacancies. My role within the project is to documenting project scope and develop the CRUD operations, ensuring a seamless user experience for application users.

ONLINE MEDICINE STORE | JAVA

'Medic' is an online medicine store that has been developed from Java. In this system store owners can add their products to the system, and customers can make purchases using it. My contribution to this system is to create a product management system. This allows customers to buy products, and store owners can access these product data through MySQL Workbench.

APARTMENT ADVERTISING WEBSITE | HTML, CSS, JS, PHP

'Prime Apartments' is a apartment advertising website that developed from HTML, CSS, JS and PHP. Customers have the ability to view available apartments and submit inquiries using the PHP form. My role in this project is create business and technical document and develop the website's homepage. This included the implementation of animated slideshows and navigation buttons for enhanced user engagement.
